

ASTi IA Installation Procedures Overview

The following is a brief outline of the main steps involved in the IA cold-start installation process. This document does not replace the referenced documents and should be used as a guideline for the main steps. The installation requires the ASTi IA DVD. Please refer to the following document section for a comprehensive list of DVD requirements:

ASTi IA DVD > Docs folder/ IA_Package_Overview_XXXX.doc/ DVD Deliverables

For the Voisus Server

Step 1: Backup System

Create a backup using the Remote Management System (RMS) if the server has configuration data (scenarios, network settings, licensing tokens, etc.). The Cold Start Procedure will cause complete erasure of the system hard drive.

See section **1.4.9. Backing Up the System** in the Voisus Server Manual (DOC-05- VS-OM) for more details. This document is located on the **ASTi Product Documentation CD** in the **Voisus folder**.

Step 2: Cold Start

Follow the **Voisus Server Cold Start Procedure** (DOC-05-VS-CS-1). This document is located on the **ASTi Product Documentation CD** in the **Voisus folder**.

- Use the included **ASTi DVD** and **ACE-RHEL DVD** for ASTi software installation.

Step 3: Restore Files

If you created a backup of the configuration data in **Step 1** above, it must be restored. To restore the backup file see section **1.4.9. Backing Up the System** in the Voisus Server Manual (DOC-05- VS-OM) for more details. This document is located on the **ASTi Product Documentation CD** in the **Voisus folder**.

Step 4: Install IA Software and Verify Manifest

Follow the **IA Software Installation Procedure** (DOC-01-IA-IP-1) found on the **ASTi Product Documentation CD** in the **IA folder**.

- Use the **ASTi IA DVD** and **IA Documentation DVD**.
- Use the **ACE-RHN DVD**.

For the Target

Step 1: Backup System

Create a backup using the Remote Management System (RMS) if the Target has configuration data (projects, network settings, options file, etc.). The Cold Start Procedure will cause complete erasure of the system hard drive.

See the **Telestra 4 Remote Management System 4 User Guide** (DOC-01-TEL4-RMS4-UG-4), section 4.3.1. **Backup System Configuration**. This document is located on the **ASTi Product Documentation CD** in the **Telestra 4** folder.

Step 2: Cold Start

Follow the **Target Cold Start Procedure** (DOC-02-TEL4-TCS-1) or **Synapse Cold Start and Installation Manual** (DOC-01-SYN4-CSI-1) depending on your system. These documents are located on the **ASTi Product Documentation CD** in the **Telestra 4** folder.

- Use the included **ASTi DVD** and **ACE-RHEL DVD** for ASTi software installation.

Step 3: Restore Files

If you created a backup of the configuration data in **Step 1** above, it must be restored. To restore the backup file see the **Telestra 4 Remote Management System 4 User Guide** (DOC-01-TEL4-RMS4-UG-4), section 4.3.2. **Restore System Backup**.

Step 4: Install IA Software and Verify Manifest

Follow the **IA Software Installation Procedure** (DOC-01-IA-IP-1) found on the **ASTi Product Documentation CD** in the **IA** folder.

- Use the **ASTi IA DVD** and **IA Documentation DVD**.
- Use the **ACE-RHN DVD**.

For the Studio

Step1: Backup System

Save any files (previous backups, text files, etc.) on the Studio that the user would like to keep. The Cold Start Procedure will cause complete erasure of the system hard drive.

Step 2: Cold Start

Follow the **Synapse Cold Start and Installation Manual** (DOC-01-SYN4-CSI-1) or the **ACE Studio Cold Start Procedure** (Doc-02-TEL4-ASCS-1) depending on your system. The necessary documents are located on the **ASTi Product Documentation CD** in the **Telestra 4** folder.

- Use the **ASTi DVD** and **ACE-RHEL DVD** for the Studio installation.

Step 3: Install IA Software and Verify Manifest

Follow the **IA Software Installation Procedure** (DOC-01-IA-IP-1) found on the **ASTi Product Documentation CD** in the **IA** folder.

- Use the **ASTi IA DVD** and **IA Documentation DVD**.
- Use the **ACE-RHN DVD**.

Step 4: Restore Files

The user can put the previously saved files (if any) back on the Studio system.

For the Studio Virtual Machine (VM)

Step1: Start the Studio VM

Follow the **ACE Studio VM Quick Start Guide** (DOC-01-ASVM-QSG-4) for software installation and VMware Player configuration.

Step 2: Install IA Software and Verify Manifest

Follow the **IA Software Installation Procedure** (DOC-01-IA-IP-1) found on the **ASTi Product Documentation CD** in the **IA** folder.

- Use the **ASTi IA DVD** and **IA Documentation DVD**.
- Use the **ACE-RHN DVD**.
