# Introduction

ASTi's Telestra product line includes a variety of USB-based digital audio and input/output (I/O) distribution equipment. USB connections originate at the Telestra processing platform, and eventually terminate at one or more Iris audio interface modules. The installation and connection of intermediate devices will vary depending on the required distribution of these Iris devices.

This document addresses which types of connections are supported (and which are not). Where connections *are* supported, maximum cable lengths and connector types are highlighted.

For the sake of clarity, this document uses the word “upstream” in reference to devices that are closer to the Telestra system in relation to other “downstream” devices.

ASTi's USB interface is based on the industry standard USB 2.0, but has been optimized for use with this product line.

***WARNING: Do not connect commercially-available, standard USB devices to the USB ports on the Iris, Axis, Prism or Spectrum devices. This may cause damage to these devices.***

## Hardware Overview

There are eight (8) different devices that can be used in any Telestra installation:

1. **Telestra:** The processing platform itself  
See “Telestra v3.0 User Guide” (DOC-01-TELS-UG-3) for full details.
2. **Iris:** The audio interface module where headsets and other I/O devices are attached.  
See “Iris Audio Interface Module Technical & User Guide” (ASSY-01-UMAU-UG-1) for full details.
3. **Axis:** The local USB distribution module  
See “Axis Local Distribution Module Technical & User Guide” (ASSY-01-UMLD-UG-1) for full details.
4. **Prism:** The USB extender module
5. **Spectrum:** The remote USB distribution module  
See “Prism & Spectrum Remote Distribution Modules Technical & User Guide” (ASSY-01-UMRXRD-UG-1) for full details.
6. **1U Iris Extended and Local Options:** The 1U Extended Iris is a 1U enclosure containing one (1) standard Iris devices and one (1) Spectrum remote distribution module. The 1U Local Iris is a 1U enclosure containing one (1) Iris devices and one (1) Axis local distribution module.  
See “Iris Audio Interface Module Technical & User Guide” Appendix A (ASSY-01-UMAU-UG-1) for the full details.

7. **4-Channel Iris:** There are two 4-Channel Iris options. The 4-Channel Extended Iris is a single 1U enclosure containing two (2) standard Iris devices and one (1) Spectrum remote distribution module. The 4-Channel Local Iris is a single 1U enclosure containing two (2) Iris devices and one (1) Axis local distribution module.

See “Iris Audio Interface Module Technical & User Guide” Appendix A (ASSY-01-UMAU-UG-1) for the full details.

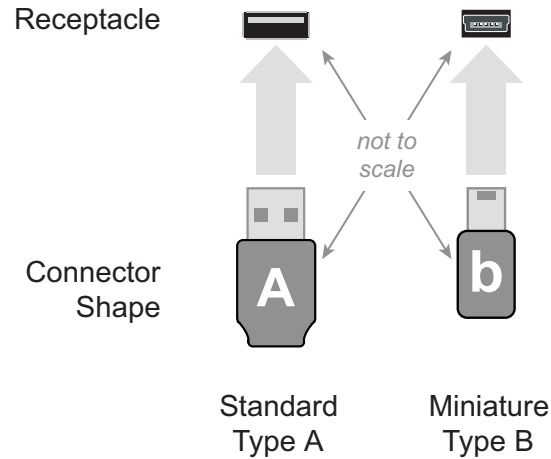

8. **6-Channel Iris:** The 6-Channel Iris is a single 1U enclosure containing three (3) standard Iris devices and one (1) Axis local distribution module.

See “Iris Audio Interface Module Technical & User Guide” Appendix B (ASSY-01-UMAU-UG-1) for the full details.

## USB Connector Types

In the following diagrams, connectors marked with an “A” represent standard USB type A plugs. Connectors marked with a “b” represent miniature USB type B plugs.

## Cables Suggestion

*ASTi highly suggests using professionally-made, high-quality Cat 5 and USB cables. Our tests have shown that most errors are the result of improperly constructed or poor quality cables.*

## Power-On Ordering Requirements and Lost USB Devices

The USB audio distribution architecture has specific requirements regarding the power on sequencing of devices in order to achieve a working system. The Telestra processor system must perform a discovery process in order to find all the devices that are connected, and hence this system is started last in the sequence of elements. The discovery process runs as part of the system framework boot process, or it is manually initiated from RMS, by clicking the “Hardware” tab, and then the “Reset USB network” link. Prior to this all other elements of the USB sub-system must be connected, and powered on. **Note** that the Prism/Spectrum extender architecture should be powered on before or simultaneously with the Iris audio interface units.

If any element of the USB sub-system is powered off and then back on again without rebooting the Telestra processor, or initiating a manual USB discovery, then the result will be that those devices are “lost” to the system, and will no longer process audio. The most effective way to check for this condition is to look at the RMS system, select the “Hardware” tab, and then the “Layout” tab. Any Iris units that were connected at the time of system boot and have been subsequently powered off will show up with a red ‘X’ through the device. If profiling is turned on (see Telestra 3 User Guide for details), then any device that is not active on the USB sub-system will be reported with a red ‘X’. To recover from this situation, power on the required USB devices (Prism devices first, Iris devices last), and then either reboot the Telestra, or initiate a manual USB re-discovery using RMS. If using RMS, once the re-discovery process has completed, it will be necessary to reload the model.

## Telestra Connections

All USB devices require ASTi cable "CA-UA-UMB-X", where X stands for length, for correct operation.

### Telestra-to-Axis

From Telestra (upstream)

To Axis (downstream)

This type of connection is supported.

Cable type: USB cable, standard A type connector to miniature B type connector

Maximum cable length: 3 feet

### Telestra-to-6-Channel Iris

From Telestra (upstream)

To 6-Channel Iris (downstream)

This type of connection is supported.

Cable type: USB cable, standard A type connector to miniature B type connector

Maximum cable length: 3 feet

### Telestra-to-Prism

From Telestra (upstream)

To 2ch or 4ch Prism (downstream)

This type of connection is supported for both the 2-channel and 4-channel versions of the Prism module.

Cable type: USB cable, standard A type connector to miniature B type connector

Maximum cable length: 3 feet

### Telestra-to-Spectrum

From Telestra (upstream)

To Spectrum (downstream)

*This type of connection is not supported.*

## Telestra-to-Iris

From Telestra (upstream)

To Iris (downstream)

*This type of connection is not supported.*

## Telestra-to-1U Local Iris

From Telestra (upstream)

To 1U Local Iris (downstream)

This type of connection is supported.

Cable type: USB cable, standard A type connector to miniature B type connector

Maximum cable length: 3 feet

## Telestra-to-1U Extended Iris

From Telestra (upstream)

To 1U Extended Iris (downstream)

*This type of connection is not supported.*

## Telestra-to-4-Channel Local Iris

From Telestra (upstream)

To 4-Channel Local Iris (downstream)

This type of connection is supported.

Cable type: USB cable, standard A type connector to miniature B type connector

Maximum cable length: 3 feet

## Telestra-to-4-Channel Extended Iris

From Telestra (upstream)

To 4-Channel Extended Iris (downstream)

*This type of connection is not supported.*

## Axis Connections

All USB devices require ASTi cable "CA-UA-UMB-X", where X stands for length, for correct operation.

### Axis-to-Axis

From Axis (upstream)

To Axis (downstream)

*This type of connection is not supported.*

### Axis-to-Prism

From Axis (upstream)

To 2ch or 4ch Prism (downstream)

*This type of connection is not supported, regardless of the type of Prism device.*

### Axis-to-Spectrum

From Axis (upstream)

To Spectrum (downstream)

*This type of connection is not supported.*

### Axis-to-Iris

From Axis (upstream)

To Iris (downstream)

15 ft. max.

This type of connection is supported.

Cable type: USB cable, standard A type connector to miniature B type connector

Maximum cable length: 15 feet

## Axis-to-1U Extended and Local Iris

From Axis (upstream)

To 1U Extended and Local Iris (downstream)

*This type of connection is not supported.*

## Axis-to-4-Channel Extended and Local Iris

From Axis (upstream)

To 4-Channel Extended and Local Iris (downstream)

*This type of connection is not supported.*

## Axis-to-6-Channel Iris

From Axis (upstream)

To 6-Channel Iris (downstream)

*This type of connection is not supported.*

## Prism Connections

All USB devices require ASTi cable "CA-UA-UMB-X", where X stands for length, for correct operation.

### Prism-to-Axis

From 2ch or 4ch Prism (upstream)

To Axis (downstream)

*This type of connection is not supported, regardless of the type of Prism device.*

### Prism-to-Prism

From 2ch or 4ch Prism (upstream)

To 2ch or 4ch Prism (downstream)

*This type of connection is not supported, regardless of the types of Prism devices.*

### Prism-to-Spectrum

From 2ch or 4ch Prism (upstream)

To Spectrum (downstream)

This type of connection is supported for both the 2-channel and 4-channel versions of the Prism module.

Cable type: Category 5 or better, Unshielded Twisted Pair (UTP), RJ-45 connectors

Maximum cable length: 300 feet

### 2-Channel Prism-to-Iris

From 2ch Prism (upstream)

To Iris (downstream)

This type of connection is supported for *only the 2-channel version* of the Prism module.

Cable type: USB cable, standard A type connector to miniature B type connector

Maximum cable length: 6 feet

## Prism-to-1U Extended Iris

From 2ch or 4ch Prism (upstream)

To 1U Extended Iris (downstream)

This type of connection is supported for both the 2-channel and 4-channel versions of the Prism module.

Cable type: Category 5 or better, Unshielded Twisted Pair (UTP), RJ-45 connectors

Maximum cable length: 300 feet

## Prism-to-1U Local Iris

From 2ch Prism (upstream)

To 1U Local Iris (downstream)

*This type of connection is not supported, regardless of the types of Prism devices.*

## Prism-to-4-Channel Extended Iris

From 2ch or 4ch Prism (upstream)

To 4-Channel Extended Iris (downstream)

This type of connection is supported for both the 2-channel and 4-channel versions of the Prism module.

Cable type: Category 5 or better, Unshielded Twisted Pair (UTP), RJ-45 connectors

Maximum cable length: 300 feet

## Prism-to-4-Channel Local Iris

From 2ch Prism (upstream)

To 4-Channel Local Iris (downstream)

*This type of connection is not supported, regardless of the types of Prism devices.*

## Prism-to-6-Channel Iris

From 2ch Prism (upstream)

To 6-Channel Iris (downstream)

*This type of connection is not supported, regardless of the types of Prism devices.*

## 4-Channel Prism-to-Iris

From 4ch Prism (*upstream*)

To Iris (*downstream*)

*This type of connection is not supported using the 4-Channel Prism device.*

## Spectrum Connections

All USB devices require ASTi cable "CA-UA-UMB-X", where X stands for length, for correct operation.

Note: Only two Iris devices can connect to each Spectrum.

### Spectrum-to-Axis

From Spectrum (upstream)

To Axis (downstream)

*This type of connection is not supported.*

### Spectrum-to-Prism

From Spectrum (upstream)

To 2ch or 4ch Prism (downstream)

*This type of connection is not supported, regardless of the type of Prism device.*

### Spectrum-to-Spectrum

From Spectrum (upstream)

To Spectrum (downstream)

*This type of connection is not supported.*

### Spectrum-to-Iris

From Spectrum (upstream)

To Iris (downstream)

6 ft. max.

This type of connection is supported.

Cable type: USB cable, standard A type connector to miniature B type connector

Maximum cable length: 6 feet

**Note:** Due to the nature of the USB extension, the Iris must be powered on after the Prism.

## Spectrum-to-1U Extended and Local Iris

From Spectrum (upstream)

To 1U Extended and Local Iris (downstream)

*This type of connection is not supported.*

## Spectrum-to-4-Channel Extended and Local Iris

From Spectrum (upstream)

To 4-Channel Extended and Local Iris (downstream)

*This type of connection is not supported.*

## Spectrum-to-6-Channel Iris

From Spectrum (upstream)

To 6-Channel Irises (downstream)

*This type of connection is not supported.*

## Iris Connections

All USB devices require ASTi cable "CA-UA-UMB-X", where X stands for length, for correct operation.

### Iris-to-Axis

From Iris (upstream)

To Axis (downstream)

*This type of connection is not supported.*

### Iris-to-Prism

From Iris (upstream)

To 2ch or 4ch Prism (downstream)

*This type of connection is not supported.*

### Iris-to-Spectrum

From Iris (upstream)

To Spectrum (downstream)

*This type of connection is not supported.*

### Iris-to-Iris

In some configurations, it is possible to daisy-chain one Iris device off another, upstream Iris module. This can only be done when the upstream Iris device is connected directly to an Axis local distribution module.

From Iris off Axis (upstream)

To Iris (downstream)

6 ft. max.

This type of connection is supported.

Cable type: USB cable, standard A type connector to miniature B type connector

Maximum cable length: 6 feet

If the upstream Iris device is connected to a Spectrum unit, daisy-chaining is not supported.

From Iris off Spectrum (upstream)

To Iris (downstream)

*This type of connection is not supported.*

Iris-to-1U Extended and Local Iris

From Iris (upstream)

To 1U Extended and Local Iris (downstream)

*This type of connection is not supported.*

Iris-to-4-Channel Extended and Local Iris

From Iris (upstream)

To 4-Channel Extended and Local Iris (downstream)

*This type of connection is not supported.*

Iris-to-6-Channel Iris

From Iris (upstream)

To 6-Channel Iris (downstream)

*This type of connection is not supported.*

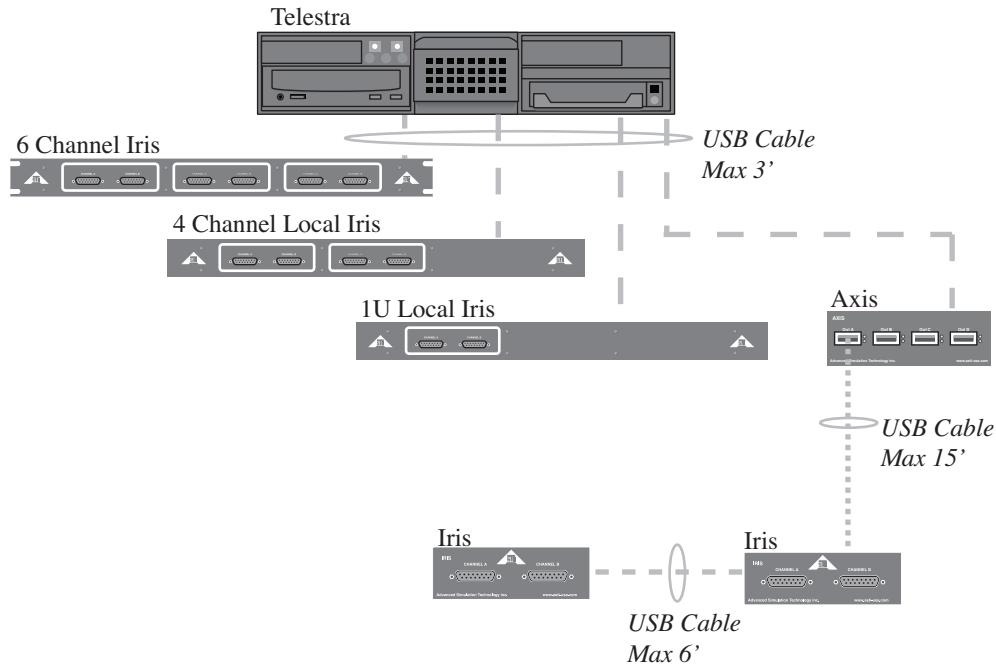

## Summary

From Device	To	Cable Type	Max. Length (ft.)
